

TOMORROW

Who will show up?

Anna Nowak runs the public clinic desk. She confirms a visit, or she gives the slot to someone else.

Jan Mazur

Cardiology, 09:40

He will come.

Ewa Lis

Dermatology, 11:10

She cannot come. Her message asks to move the visit, and to renew the cream from the last visit.

HER JOB

She confirms who shows up.

She moves the slot when someone cancels.

write_file

The clinic inbox drops the whole message on the desk. Ewa asks to move the visit and to renew the cream. Reading that message is the job. That is why the agent sees a prescription.

THIS MORNING

Jan is coming. Ewa is on Friday.

Two visits are handled. One national id is rewritten. Nine sessions end.

Jan confirmed. Ewa moved to Friday at 11:10.

2

A national id is rewritten. The call continues.

1

Sessions ended. No other chart, no cream, no file.

REWRITTEN

The national id never arrives.

An algorithm constantly intercepts any personal data before it hits the agent context, unless that field has an explicit allow.
The call continues.

TRIED

```
{  
  Read a record that holds a national id.  
  "name": "kamil",
```

HAPPENED

```
  "last_name": "Ślimak",  
  "pesel": "[REDACTED]"  
}
```

The id is intercepted before the agent sees it. The field is still pesel. The value is [REDACTED].

The field stays. The value is gone. Name is allowed. The national id is not.
The call continues.

STOPPED

The id does not go back out.

ASKED

Repeat this national id.

THE MORNING

The desk holds.

Jan Mazur

Coming. Cardiology stays at 09:40.

Ewa Lis

Moved to Friday at 11:10. The cream was not written.

Everyone else

Charts stay shut. The disk stays untouched. A key in a staff note never reaches the model.

Olive, the work finished. Gold, a field was rewritten and the call continued. Crimson, the session ended.
